

Application Developer

Position Overview

The Application Developer is responsible for building, optimizing and maintaining conceptual and logical database models for ITFO clients. This work includes analyzing system requirements and designing and implementing migration models for existing data. The role is the lead application developer for ITFO clients.

Primary Responsibilities

- Supervise, mentor and train team members on existing workflows and meeting Service Level Agreements
- Conduct requirement analysis, ETL, and data visualization
- Automate and optimize workflows
- Lead disaster recovery, requirement analysis, implementation and management adding to the knowledge repository by creating and reviewing new system documentation
- Coordinate with program areas on risk, assurance, control and transition to improve the system resiliency
- Conduct documentation reviews, managing releases and implementation of new projects

Qualifications

Required:

- Previous experience as an application developer or a similar role
- Knowledge of programming languages (e.g. Microsoft SQL Server, SSIS, ASP.NET; Tableau and Power BI)
- Hands-on data analytics experience (e.g. data ETL and visualization)
- Knowledge of ITIL framework and tools (e.g. incident, problem and change management, Service Now, Remedy)
- Project management skills
- Strong organization skills
- Good communication skills

Nice to have:

- Degree in Computer Science, IT, or similar field
- Relevant certifications
